Application/Control Number: 09/943,574

Art Unit: 1623

DETAILED ACTION

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

Reference to Continuing Applications

This application filed under 37 C.F.R. § 1.62 lacks the necessary reference to the prior application. A statement reading "This is a Continuation of application Serial No. 08/765,874, filed 5/27/1997, now U.S. Patent No. 6,303,778" should be entered following the title of the invention or as the first sentence of the specification.

Objection to the specification

The use of the trademark RAFTILINE has been noted in this application. It should be capitalized wherever it appears and be accompanied by the generic terminology.

Abstract Objected to: Minor Informalities

The abstract is objected to for the abbreviation DP. The term should be set initially fully as "degree of polymerization" before an abbreviation is used. Appropriate correction is required.

Art Unit: 1623

Claim Objections 13, 14, 27

Claims 13, 14 and 27 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Double Patenting

Claim Rejections - 35 USC § 101

35 U.S.C. § 101 reads as follows:

"Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter or any new and useful improvement thereof, may obtain a patent therefore, subject to the conditions and requirements of this title".

Claims 1, 3-5 and 8 are rejected under 35 U.S.C. § 101 as claiming the same invention as that of claims 2-6 and 8 of prior U.S. Patent No. 6,303,778 ('778). This is a double patenting rejection.

Claim 1, 3-5 and 8 are identical in scope to claims 2-6 of '778. The process for producing a fractionated polydisperse inulin composition of claim 1 wherein the particles are separated from the solution and washed is set forth in claim 2 of '778. The scope of the limitations set forth in claims 3-5 and 8 is identical to the limitations set forth in claims 3-6 of '778.

Nonstatutory Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d

Application/Control Number: 09/943,574

Art Unit: 1623

1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 2, 7 and 9 are rejected under the judicially created doctrine of obviousnesstype double patenting as being unpatentable over claims 7 and 9 of U.S. Patent No. 6,303,778. An obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but an examined application claim not is patentably distinct from the reference claim(s) because the examined claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., In re Berg, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); In re Goodman, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); In re Longi, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985). Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 2, 7 and 9 are generic to all that is recited in claims 7 and 9 of U.S. Patent No. 6,303,778. That is, claims 2, 7 and 9 of U.S. Patent No. 6,303,778 ('778) fall entirely within the scope of claims 2, 7 and 9 or, in other words, claims 2, 7 and 9 are anticipated by claims 2, 7 and 9 of '778. The washing step of claim 2 of '778 would inherently include washing with water set forth in instant claim 2. Instant claims 7 and 9 limit the process for producing a fractionated polydisperse inulin composition, wherein the native polydisperse inulin is native chicory inulin or fractionated chicory inulin and the rapid cooling is between 15° C and 25° C at a rate between 1° C and 7° C/sec., respectively. The use of native chicory inulin or fractionated chicory inulin or modifying the temperature and rate of cooling were

Application/Control Number: 09/943,574 Page 5

Art Unit: 1623

limitations that were present in claims 7 and 9 of '778, before the particles were crystallized, similarly, the same modifications were present in claims 7-9 of the instant claims prior to crystallization.

Claim Rejections - 35 U.S.C. 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-12, 15-26, 28 and 29 are rejected under 35 U.S.C. 103 over Kunz et al. (Kunz), U.S. Patent No. 5,478,432.

Claims 1-12, 15-26, 28 and 29 are drawn to a fractionated polydisperse fructan composition having an avg. degree of polymerization (DP) double or higher than the avg. DP of native polydisperse carbohydrate, containing essentially no monomers, dimers and oligomers; wherein said composition is included in pharmaceutical, cosmetical food and/or feed compositions.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Application/Control Number: 09/943,574

Art Unit: 1623

Kunz teaches a polydisperse fractionated fructan composition in the form of inulin (crude inulin= chicory) wherein the DP is >20, and is virtually free from monomers, dimmers and oligomers (DP <10-12) (columns 3-7). Kunz teaches that the benefit of fructan/inulin compositions with longer DP profiles is that any mono-, di- or oligosaccharides present in an inulin compositions give undefined product mixtures whose purifications are problematic, tend to be hygroscopic and do not promote the neutral flavor demonstrated in long chain inulins (column 1, lines 33-47).

Applicant admits in the specification it is already known in the art to use fructan compositions containing inulin in pharmaceutical, cosmetic, food and feed products, thus the use of the fructan/inulin composition for these purposes would be obvious to one of skill in the art. Kunz verifies this as it teaches the use of inulin compositions of the invention in foodstuffs and pharmacological active substances (col. 4, lines 51-57).

Kunz does not specifically teach the technical specifications of less than .2 wt% ash, no detectable alcohol, however, Kunz does teach that after separation of the monomers, dimmers and oligomers, the inulin composition is subjected to further purification procedures which promote lowered ash and alcohol content such as strong acid cation exchange resins, ultrafiltration and drying which would certainly promote the ash and alcohol specifications claimed by applicant.

It would have been prima facie obvious to produce a fructan composition having an an avg. degree of polymerization (DP) double or higher than the avg. DP of native polydisperse carbohydrate, containing essentially no monomers, dimmers and oligomers.

One of skill in the art would have been motivated to produce such a composition given the prior art's recognition that mono-, di- or oligosaccharides present in an fructan/inulin compositions give undefined product mixtures whose purifications are problematic, tend to be hygroscopic and do not promote the neutral flavor demonstrated in compositions comprising primarily long chain inulins (>DP 20).
